ISWITCH: ENERGY MANAGEMENT

1/ Presence management

When the guest comes into the room, the door sensor is activated and then if motion is detected, the energy saver will turn the energy on. Once inside the room, the guest will have the control over the air conditioning and/or lighting . If the guest is asleep or in the bathroom, the lights /air conditioning won't turn off, if there is no door opening.

When the guest leaves the room, the door sensor is activated and if no one is detected, the energy will turn off.

 [Watch video](#)

2/ Window management:

If the guest opens the window and keeps it open (for a while) , the air conditioning will turn off.

 [Watch video](#)

3/ DND & MUR management:

The guest will select the DND option (do not disturb) or MUR (make up room) that will be checked by the cleaning staff on the corridor indicator.
